

DWS Emerging Markets Fixed Income Fund

Q4 | 12.31.23

Share Class: A | SZEAX C | SZEEX S | SCEMX INST | SZEIX

Objective

The fund seeks to provide high current income and, secondarily, long-term capital appreciation.

Strategy

Under normal circumstances, the fund invests a majority of assets in debt securities issued by governments and corporations in emerging market countries. Management typically considers a number of factors, including economic and currency outlooks, possible interest rate movements, capital flows, debt levels, inflation trends, credit quality of issuers, security characteristics and changes in supply and demand within global bond markets when constructing the portfolio.

Expense ratio (as of latest prospectus)

Class	Net	Gross	Contractual Waiver
A	1.13%	1.66%	02/28/2025
C	1.88%	2.64%	02/28/2025
S	0.88%	1.31%	02/28/2025
INST	0.88%	1.12%	02/28/2025

Without a waiver, returns would have been lower and any rankings/ratings might have been less favorable.

Portfolio and risk statistics² (12/31/23)

Fund inception date	12/31/1993

Performance is historical and does not guarantee future results. Investment returns and principal fluctuate so your shares may be worth more or less when redeemed. Current performance may be lower or higher than the performance data quoted. Please visit www.dws.com for the fund's most recent month-end performance. Performance includes reinvestment of all distributions. Index returns assume reinvestment of all distributions and do not reflect fees or expenses. It is not possible to invest directly in an index. Not all share classes are available to all investors. A minimum investment of \$1 million is required to open an account for Institutional shares.

* This fund's performance prior to inception reflects that of Class S shares. Returns prior to inception reflect the original share class performance, adjusted for higher operating expenses and/or the maximum sales charge.

Sector allocation (12/31/23)

Holdings-based data is subject to change.

¹ The JPMorgan EMBI Global Diversified Index tracks the performance of external debt instruments (including US-dollar-denominated and other external-currency-denominated Brady bonds, loans, Eurobonds and local market instruments) in the emerging markets.

² Effective maturity is the weighted average of the bonds held by the fund taking into consideration any available maturity shortening features. Effective duration is an approximate measure of the fund's sensitivity to interest rate changes taking into consideration any maturity shortening features. Standard deviation is a three-year statistical measure of the volatility of a fund's returns. Generally, the greater the standard deviation, the greater the fund's volatility.

³Source: Morningstar, Inc. as of 11/30/2023.

³ Credit quality represents the higher rating of either Moody's Investors Service, Fitch Ratings or Standard & Poor's and is their opinion as to the quality of the securities they rate. Credit quality does not remove market risk and is subject to change. Junk bonds are any bond that carries a rating lower than BB is said to be speculative or a 'junk bond'.

War, terrorism, sanctions, economic uncertainty, trade disputes, public health crises and related geopolitical events have led and, in the future, may lead to significant disruptions in U.S. and world economies and markets, which may lead to increased market volatility and may have significant adverse effects on the fund and its investments.

Fund risk: Bond investments are subject to interest-rate, credit, liquidity and market risks to varying degrees. When interest rates rise, bond prices generally fall. Credit risk refers to the ability of an issuer to make timely payments of principal and interest. Investments in lower-quality ("junk bonds") and non-rated securities present greater risk of loss than investments in higher-quality securities. Investing in foreign securities presents certain risks, such as currency fluctuations, political and economic changes, and market risks. Emerging markets tend to be more volatile and less liquid than the markets of more mature economies, and generally have less diverse and less mature economic structures and less stable political systems than those of developed countries. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increase volatility. This fund is non-diversified and can take larger positions in fewer issues, increasing its potential risk. The fund may lend securities to approved institutions. Please read the prospectus for details.

Consider the investment objective, risks, charges and expenses carefully before investing. For a summary prospectus, or prospectus that contains this and other information, download one from www.dws.com or talk to your financial representative. Read the prospectus carefully before investing.
