# **DWS Floating Rate Fund**

Q1 | 3.31.24

Share Class: A | DFRAX C | DFRCX S | DFRPX | INST | DFRTX

# Objective

The fund seeks to provide high current income.

# Strategy

Investors may wish to consider floating-rate loans, given their potential to help combat today's unique market challenges, including fluctuating interest rates and higher inflation. Several key attributes—floating coupons, seniority in capital structure and how assets are secured—differentiate floating-rate loans from other fixed-income securities and help make them good overall diversifiers in a fixed-income portfolio. The fund uses a diversified investment approach and is managed by an experienced investment team.

### Expense ratio (as of latest prospectus)

Class	Net	Gross	Contractual Waiver
A	1.04%	1.29%	09/30/2024
С	1.79%	2.09%	09/30/2024
S	0.84%	1.13%	09/30/2024
INST	0.79%	0.97%	09/30/2024

Without a waiver, returns would have been lower and any rankings/ratings might have been less favorable.

Holdings-based data is subject to change.

War, terrorism, sanctions, economic uncertainty, trade disputes, public health crises and related geopolitical events have led and, in the future, may lead to significant disruptions in U.S. and world economies and markets, which may lead to increased market volatility and may have significant adverse effects on the fund and its investments.

Fund risk: Bond and loan investments are subject to interest-rate, credit, liquidity and market risks to varying degrees. When interest rates rise, bond prices generally fall. Credit risk refers to the ability of an issuer to make timely payments of principal and interest. As interest rates change, issuers of higher (or lower) interest debt obligations may pay off the debts earlier (or later) than expected causing the fund to reinvest proceeds at lower yields (or be tied up in lower interest debt obligations). Floating rate loans tend to be rated below investment grade. Investments in lower-quality ("junk bonds") and non-rated securities present greater risk of loss than investments in higher-quality securities. In certain situations, it may be difficult or impossible to sell an investment at an acceptable price. Investing in foreign securities presents certain risks, such as currency fluctuations, political and economic changes, and market risks. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increase volatility. If affiliates of the Advisor participate in the primary and secondary market for senior loans, legal limitations may restrict the fund's ability to participate in restructuring or acquiring some senior loans. The fund may lend securities to approved institutions. Please read the prospectus for details.

Consider the investment objective, risks, charges and expenses carefully before investing. For a summary prospectus, or prospectus that contains this and other information, download one from www.dws.com or talk to your financial representative. Read the prospectus carefully before investing.

<sup>&</sup>lt;sup>1</sup> Morningstar LSTA US Leveraged Loan Index is an unmanaged, total return index that is designed to deliver comprehensive, precise coverage of the U.S.

<sup>&</sup>lt;sup>2</sup> Standard deviation is a three-year statistical measure of the volatility of a fund's returns. Generally, the greater the standard deviation, the greater the fund's volatility. Average life is the estimate length of time the principal of a bond is expected to be outstanding before it is repaid, taking into account the possibility of early payments. §Source: Morningstar, Inc. as of 02/29/2024.

<sup>&</sup>lt;sup>3</sup> Credit quality represents the rating of Standard & Poor's Corporation and is their opinion as to the quality of the securities they rate. Credit quality does not remove market risk and is subject to change. Junk bonds are any bond that carries a rating lower than BB is said to be speculative or a 'junk bond'.
